

E-Z Peel Clear

E-Z Peel Clear is a high solids, water based peelable coating used to protect paint spray booth walls against heavy accumulations of paint overspray. The product forms a uniform clear coating which is ideal for coating booths with large glass surfaces or where a view of the operation is mandatory. E-Z peel Clear dries quickly and can be peeled from surfaces in large sheets.

Features and Benefits

- Can be applied by spray, brush or roller
- Designed to be peeled from walls in large sheets
- Contains no suspect carcinogens
- Forms a clear film for excellent visibility

Typical Properties

Appearance	Clear, viscous liquid
Bulk Density	9.6 lb./gal.
Solubility	Completely water dispersible
Flash Point	None to boiling
V.O.C. Content	Negligible

Application Procedure

E-Z Peel Clear is normally applied by airless spray system using a tip with a large aperture and a moderate angle. The product is applied to a wet film thickness of 5 mils to 15 mils, depending on the application. In general, the thicker the coating the easier the removal. Once applied, E-Z Peel Clear dries to a clear film. The coating remains in place during production hours and is removed after sufficient overspray has deposited. To remove, simply score the film and lift a corner off the wall. The overspray, coated film should lift off the wall in large sheets to be disposed of according to government regulations concerning paint waste.
